RECOMMENDATION	75

EXECUTIVE SUMMARY

As one of the world's largest emerging market economies, Indonesia transitioned to an upper-middle income country in 2019, with an average economic growth of 5.6% over the last fifty years. Strong and stable economic growth sharply reduced poverty, raising living standards for millions of people and enabling a vibrant, growing middle class. Indonesia has consistently underinvested in its health sector, with only 2.9 percent of its GDP on the health system.

The COVID-19 pandemic has unmasked the chronic vulnerabilities in the Indonesian health system, including financing shortfalls, gaps in health infrastructure, the availability and quality of health workers, and inequities in access to healthcare. The pandemic regressed many of the significant health developments in Indonesia. Further, it exposed the significant gaps in the system, particularly in the primary care health setting, patient referral system, early detection and preparedness, considerable loss of human capital, and the fragility of the medical supply chain.

After the pandemic ended, other challenging health outcomes, such as communicable and non-communicable diseases, maternal and child health, and nutritional health, led to further efforts to reform the Indonesian health system. Under the leadership of a visionary Health Minister, Budi Gunadi Sadikin, the Indonesian Ministry of Health (MoH) has embarked on an ambitious plan to comprehensively transform the Indonesian health system.

The health budget in the Indonesian state Budget for 2025 is Rp 197.9 trillion, or 5.5% of the state spending. External sources only account for about 1 percent of the total health spending. However, donors provide a significant share of resources for key priority areas such as tuberculosis (TB), HIV, and malaria.

Addressing the health transformation plan and the gap in financing, the MoH is inviting support from donors to partner with the implementation of the health transformation agenda, which describes the best opportunity for health reform in Indonesia in 25 years.

BAB1

Introduction

1.1 BACKGROUND

1.1.1. POST-PANDEMIC GLOBAL HEALTH ISSUE

As the world changes, globalization is marked by technological advancement, economic growth, foreign trade, and cross-border travel and communication becoming very common. Yet, it has also come with the consequences of an increasing chance of diseases spreading. We have witnessed massive failures of healthcare systems worldwide on multiple levels during the COVID-19 pandemic. It has caused millions of preventable deaths and a reversal of sustainable development goals progress for many countries.

Some of the significant concerns of global health issues that deserve mention are:

- Infectious diseases include HIV/AIDS, malaria, and tuberculosis, as well as new infectious diseases like COVID-19 and Avian flu.
- Rising prevalence of noncommunicable diseases, such as diabetes, hypertension, cardiovascular, and cancer
- The growing issue of bacteria resistance to antibiotics or antimicrobial resistance.
- Mental health concerns, including anxiety, depression, and addiction, are increasing the strain on healthcare costs.

1.1.2. GLOBAL HEALTH BEST PRACTICE

The Ministry of Health referred to health guidelines set by three international organizations : the Sustainable Development Goals by the United Nations, World Bank, and OECD.

The health guidelines set by these global organizations are slightly varied, yet it falls into four (4) key themes :

1. Healthy lifestyle, community and population physically and mentally;
2. Health resilience and preparedness;
3. Accessibility, quality, and affordability; and
4. Health system, policy, and governance.

**TABLE 1. GLOBAL BEST PRACTICES**

SDGs	World Bank	OECD	4 Key themes governing health outcomes
Good health and well-being for all	Increase life expectancy at birth	Health Data and Statistics	
Reduce the global maternal mortality ratio	Reduction in infant mortality rate Reduce prevalence of HIV Reduce prevalence of HIV and TB	Mental health services improvement	Healthy lifestyle, community, and population physically and mentally
Reduce premature mortality from (NCDs) by a third		Long-Term Care for the vulnerable	
End preventable deaths of newborns and children under 5	Improve maternal mortality ratio	Health Workforce supply, distribution and training	
End AIDS, TB, malaria, and neglected tropical diseases.			
Strengthen the capacity of all countries for global health risk	Ensure immunization coverage	Pharmaceuticals and HealthTech advancement	Health resilience and preparedness
Achieve universal health coverage	Access to clean water and sanitation	Patient Safety and Quality of Care	Accessibility, quality, and affordability
Reduce # of deaths and illnesses from hazardous chemicals	Optimize total health expenditure	Health System Performance	Health system, policy and governance
Increase health financing and the recruitment	Health workforce optimization	Health Policy Reviews	

Additionally, we also benchmark against health guidelines from other countries, developed countries and developing countries, which has aligned its health pillars in accordance with the global guidelines. We take a look at the Ministry of Health-equivalent governing bodies in Australia, Japan, Malaysia, China and India.

TABLE 2. HEALTH GUIDELINES BENCHMARK FROM OTHER COUNTRIES

Australia	Japan	Malaysia	China	India
Provide equal access to healthcare and medicines for all Australians	Lean health care: implement value-based health care	Ensure the population receives comprehensive services that are affordable	Improve health service capabilities	Progressively achieve Universal Health Coverage
Strengthen public and private hospitals	Life Design: empower society and support personal choice	Transform healthcare service delivery	Promote healthy lifestyle and control major health risk factors	Reinforce trust in the Public Health Care System
Prioritize mental and preventive health	Global Health leader: lead and contribute to global health	Advance health promotion and disease prevention	Expand the scale of the health industry	Align growth of private health care sector with public goals
Ageing well and aged care		Strengthen the health service's foundation and governance	Ensure comprehensive health promotion institutional system	Achieve quantitative goals and Objective
Strengthen Medical				

AGENDA:

- Healthy lifestyle, community, and population physically and mentally
- Accessibility, quality, and affordability
- Health resilience and preparedness
- Health system, policy and governance

1.1.3. NATIONAL HEALTH TRANSFORMATION (LAW NO 17 YEAR 2023)

The COVID-19 pandemic is a wake-up call for Indonesia's healthcare system. It exposed our deficiencies in the three most critical components: medical supplies, medical devices, and medical human resources. In addition, we needed more risk mitigation preparedness in place, and the government policy required consistency.

Also, Indonesia will have 68% of the population in productive age, known as the 'Demographic Bonus.' After the peak of the 'Demographic Bonus,' the aging population is expected to increase. Therefore, investing in healthcare for productive individuals and treating the aging population is crucial.

When formulating Indonesia future health priorities, MoH also received notes from the Minister and regional units, which consist of:

- **Ensure productivity of the workforce** and serves as a cornerstone for bolstering Indonesia's economic vitality
- Indonesia needs a comprehensive approach to addressing the health needs and challenges individuals face from **infancy through old age**
- Learning from COVID-19, Indonesia needs to build robust systems and capacities to effectively **prevent, detect, and respond to infectious disease outbreaks, ensuring minimal disruption to society and healthcare systems**
- Indonesia needs to **ensure timely and convenient access to services that meet established standards** and promotes positive outcomes, while minimizes financial barriers to care
- Ensure **identification, assessment, and mitigation of potential risks** associated with healthcare policies and regulations
- **Optimizing the allocation and utilization of financial resources within the healthcare system** to achieve better health outcomes while minimizing waste and inefficiencies

Bappenas also prepared a list of priorities, namely:

- **Social transformation goals:** Improving the quality of human life throughout the life cycle and creating a more prosperous, fair, and cohesive society.
- **Ensure health for all Indonesians to realize social transformation goal** under the Indonesia emas 2045 vision
- **Increase life expectancy and quality of life** of all Indonesians as indicator of success for health sector
- **Increase physical, cognitive, and mental health across all stages of life** Having lower **risks of illness, premature death, and healthcare costs**
- Leverage opportunity in technology development to further improve **health system**

The global health benchmark and best practice, and additional feedback and inputs from the Ministers, regional units and Bappenas are summarized into five (5) Key Themes in future health priorities :

1. Healthy and productive, population across all stage of life
2. Future pandemic resilience and preparedness
3. Accessibility, availability, and quality healthcare
4. Risk management and financing optimization
5. Health system and technology

Law no 17 year 2023 on health is referred to as 'Health Law' or 'Omnibus HealthLaw' which was enacted to significantly reform the Indonesian health sector by replacing the previous thirteen existing (11) Health Laws. It encompasses six (6) key pillars:

1. Transformation of primary healthcare
2. Transformation of referral healthcare services
3. Health resilience system transformation
4. Health financing system transformation
5. Health human resources transformation
6. Health technology transformation.

The health legislation could serve as a foundation to formalize commitments and goals, establish the fundamental aspects of health system architecture, and facilitate multisector cooperation to achieve the health system goals.

1.1.4. RPJMN 2025-2029

While the Current Government has not finalized the Mid-Term National Development Plan (RPJMN), the draft summary is available for public in Bappenas' website.

RPJMN 2025-2029 describes the president's vision, mission and program while still referring to the 2025 to 2045 RPJPN. The RPJMN is a guideline for composing the Renstra (Strategic Plan) of the Ministries and (State) Institutions, the Mid-Term Regional Development Plan or RPJMND (Provincial/district/and city) and Government Work Plans or RKP as well as being a reference for business entities and non-state actors.

The RPJMN vision is similar to the 2025-2029 President and Vice President's vision which is 'Moving Forward Together Towards Golden Indonesia 2045'. It is meant to bring together all components of the nation to work together to realize the vision.

The RPJMN mission is known as 'Asta Cita' or 8 National Priorities to propel the country's economy toward an eight percent growth. Substantial economic growth is a crucial component of Prabowo-Gibran's eight visions, known as the eight (8) Asta Cita.

FIGURE 2. 8 ASTA CITA (8 NATIONAL PRIORITIES) OF RPJMN 2025-2029

ASTA CITA

President Prabowo Soebianto and
VP Gibran Rakabuming Raka's Vision and Missions

1.1.5. RENCANA INDUK BIDANG KESEHATAN (RIBK)

Rencana Induk Bidang Kesehatan (RIBK, translated in English as 'Indonesia National Health Master Plan') 2025-2029 was developed based on the Six Building Blocks. It serves as a reference point for the government at the central, provincial, regency/city, and private sectors to build Indonesia's health sector. The Indonesia National Health Master Plan has 38 measurable objectives that have been derived from the pillars of the Ministry of Health's transformation pillars.

FIGURE 1. FRAMEWORK ON HOW RIBK DEVELOPED

1.2. THE GLOBAL PARTNERSHIP STRATEGY BLUEPRINT

One of the main components in developing effective global partnerships is having a strategy blueprint in place.

Only now does Indonesia have a strategic roadmap that guides the business unit toward achieving excellence and efficiency in contributing to the Health Transformation Plan and transforming the concerned business unit into a high-performance agency.

The Global Partnership strategy blueprint is the guidelines for conducting international partnerships with donor partners to achieve Indonesia's Health Objective in 2025-2029.

It will also outline a gap analysis to help set priorities for choosing international partners and a framework to lay the groundwork for forming partnerships with international partners (donors), while upholding our national interests.

FIGURE 1. FRAMEWORK ON HOW RIBK DEVELOPED

Global Partnership Background	Challenges	Follow-up Actions	Output

BAB 2

Situational Analysis of The Current Partnership

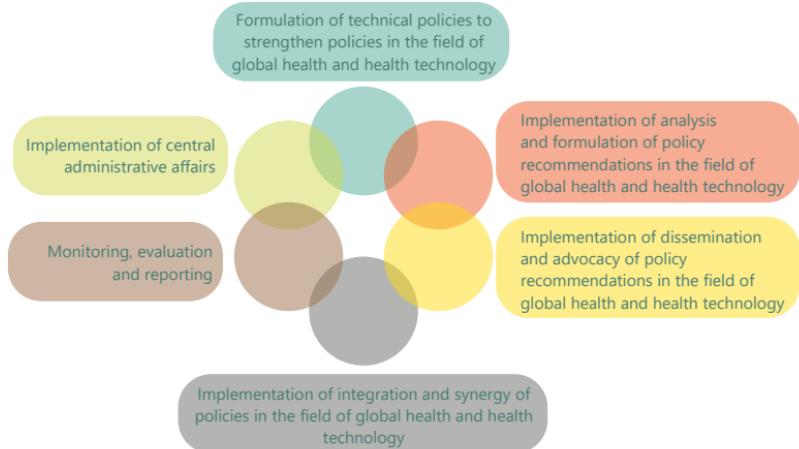

2.1 INDONESIA'S ROLE IN GLOBAL HEALTH DIPLOMACY

2.1.1 THE CENTER FOR GLOBAL HEALTH POLICY AND HEALTH TECHNOLOGY (PUSJAK KGTK) : ROLES AND RESPONSIBILITIES

The Ministry of Health of the Republic of Indonesia adapts to the current developments at both national and global levels. Therefore, starting in 2022, following organizational reform within the Ministry of Health, as declared through the Ministerial Decree of the Republic of Indonesia HK01.07/Menkes/1332/2022 concerning Duties and Functions of the Ministry of Health and the Formation of Working Team in the Implementation of Duties and Functions of the Organization, the Center for Global Health Policy and Health Technology, known as Pusjak KGK was appointed to organize the management of International Cooperations at the Ministry of Health.

The Center for Global Health Policy and Health Technology (Pusjak KGK), as a Level II Work Unit under the auspices of BKPK, in accordance with Minister of Health Regulation No. 5 of 2022, is tasked with conducting analysis, formulating recommendations, and evaluating policies in the field of global health and health technology. The functions carried out by Pusjak KGK in fulfilling these duties include, among others:

FIGURE 3. PUSJAK KGTK'S FUNCTIONS

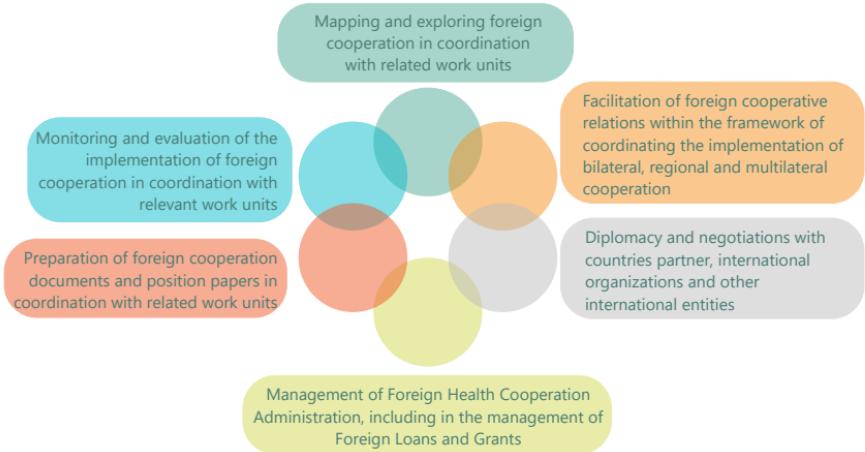

In addition to its primary roles and responsibilities, KGTK is also entrusted with additional responsibilities in the Decree of the Minister of Health of the Republic of Indonesia Number HK.01.07/Menkes/1332/2022.

These additional responsibilities include:

FIGURE 4. ADDITION RESPONSIBILITIES OF PUSJAK KGTK

According to MoH's Strategic Plan (Renstra) 2025-2029, KGTK has main duties and functions as follows:

1. Enhancing evidence-based policies for Strategic Partnerships and Global Health, which includes conducting evaluation studies, executing coordination function.
2. Strengthening collaboration and stakeholder support in health programs, which includes administering cooperation, and holding/attending health conferences

2.1.2 INDONESIA'S LEADERSHIP IN THE GLOBAL HEALTH DIPLOMACY

Global Health diplomacy is the intersection of public health and foreign affairs. According to WHO (2024), it focuses on health issues that require the cooperation of many countries to address the problems of common concern. Still, health diplomacy can also play a central role at the regional, bilateral, and national levels.

As stated by the Minister of Foreign Affairs, Ms Retno Marsudi, Indonesian diplomacy implements fundamental approaches: agility, imagination, and willingness to take risks while always adhering to the three principles.

The first principle is that Indonesia consistently upholds the principles and values of international law, such as the UN Charter and the ASEAN Charter. The second principle is that Indonesia strongly believes in the power of dialogue and cooperation; only with dialogue and collaboration can global challenges, without boundaries, be overcome. The third principle, namely national interests, is the direction of Indonesian foreign policy is unnegotiable. However, Indonesia is also committed to contributing to world peace and stability. These three principles are the essence of Indonesia's foreign relations, which adhere to the 'Free and Active' Policy.

Indonesia is an example of an emerging player in global health diplomacy. Given its population size and strategic geographical location, Indonesia's growing role is politically and socially significant. According to the World Bank (2023), it is the 10th largest economy in the world regarding purchasing power parity. Indonesia is actively involved in bilateral, regional, and multilateral health diplomacy.

Indonesia's role in global health diplomacy started long before the COVID-19 pandemic. The country hosted the Global Health Security Agenda (GHSA) ministerial meeting in 2018, which followed the event and the chairmanship in 2016. Our foreign minister also participated in a multilateral forum called the Covax AMC Engagement Group (AMC EG). Our national interest is to build national health resilience and work for global equitable access to COVID-19 vaccines. Involvement in a multilateral forum has proven beneficial.

Indonesia successfully concluded the G20 Presidency in November 2022. It held the ASEAN Chairmanship in 2023, showcasing leadership in representing developing nations' interests, where health was one of the critical issues discussed. Currently, Indonesia's diplomacy has slightly shifted. It promotes national health resilience and the Indo-Pacific vision of enhancing cooperation between Indo-Pacific states by providing technical assistance through its foreign aid program, Indonesian AID.

2.1.3. SWOT ANALYSIS

SWOT Analysis is a strategic planning technique to help organizations to identify the main SWOT laying ahead in a given context and it is intended to identify the internal and external factors that are favorable and unfavorable to embracing the full potential of an organization.

The following is the definitions of each area:

- Strengths are the characteristics of the business or project that give it an advantage over others
- Weaknesses are the characteristics that place the business or project at a disadvantage relative to others
- Opportunities are the elements in the environment that the business or project or organization could exploit to its advantage
- Threats are the elements in the environment that could cause trouble for the business or project

The approach has been used widely in health research to assess the aspects of healthcare policy and provision to inform future planning. While the SWOT analysis approach is better known for its use in organizations, the approach has also been used to analyze systems, specifically health systems.

SWOT Analysis for MoH's Global Partnership is below:

SWOT ANALYSIS

STRENGTHS

Progressive and dynamic leaderships in the Ministry of Health

Strong commitment from the Government of Indonesia to transform and strengthen the health system in Indonesia.

Strong support from donor partners, from country partners, international organizations, international NGOs, and international private sector

Vast potential to grow for multiple sectors (private sectors, public sector, and international development sector)

WEAKNESS

Small number of allocations for health sector in the State Budget

A strong tradition of bureaucratic system and lack of professionalism dominates the field of health in Indonesia.

No efficient mechanism for performance assessment and awarding is available to be applied on the personnel which lead to low morale at work

Market failures in the health sector which is defined by inefficient distribution of good and services in the free market.

Decentralization has led the health sector in Indonesia fragmented and lack of coordination between the central and provincial governments, where the primary services are in the hands of provincial government.

The lack of coordination between donor projects leads to duplications and inefficient use of resources.

The lack of monitoring and evaluation of the donor projects leads to lack of awareness about the gap between the outcome and the target.

Lack of financial accountability reporting.

Poor internal communication causes the management is failing to communicate expectations, changes, and goals.

The principle of suitability and competence is neglected in post appointments, KPIs or the indicators still keeps growing and changing in terms of numbers.

OPPORTUNITIES

A reform healthcare system offers tremendous opportunities for international organizations to enter this market successfully.

The next big things in the Indonesia's healthcare landscape are the six key pillars in the RIKK.

Market size (population: 275 million in 2022), market volume (USD 2 billion, est. 2023) and annual growth (est. 6.15% in 2023-2028) offers significant contribution to the country's economic growth.

The Government of Indonesia has considerably eased doing business by removing barriers and streamlining various licensing requirements.

Digitalization Transformation in health-care is creating a culture of innovation and change.

Increasing Indonesia's leadership role in various international organizations, forums, and initiatives

Exposures to foreign countries, international organizations and forums are opportunities to grow professionally.

THREATS

Overly bureaucratic organization and outdated organizational culture hinder initiatives from officials

Lack of performance measurement of government officials

Lack of human resources training in diplomacy, leadership, and communication skills for government officials

2.2. IDENTIFYING CURRENT INTERNATIONAL PARTNERSHIPS

2.2.1 BILATERAL PARTNERSHIPS WITH OTHER STATES

Bilateral relations refer to establishing permanent diplomatic relations between two states based on mutual consent. They work on various topics to further one's domestic and international goals.

The bilateral cooperation between Indonesia and partner countries is aimed at bringing mutual benefit and fostering progress toward improved health standards both among the respected nations and on a bilateral basis. To date, the Ministry of Health of the Republic of Indonesia has established 25 agreements, comprising ten Memoranda of Understanding (MoUs), ten Letters of Intent (LoIs), two Joint Declarations, one Governance Agreement, one Memorandum of Cooperation (MoC), and one Sustainability Partnership document. The partnerships formed during 2024 involve the United States, Brazil, China, Hong Kong, India, Japan, Germany, Cambodia, Papua New Guinea, France, Sudan, Switzerland, Zimbabwe, Sweden, and the United Arab Emirates.

BILATERAL PARTNERSHIPS MAP

2.2.2. INDONESIA'S ENGAGEMENT IN REGIONAL COOPERATION

In 2024, Indonesia actively participated in regional health cooperation with various countries and international organizations to address shared challenges such as pandemic preparedness, climate change adaptation, and strengthening health systems. Key activities included significant forums at the Asia-Pacific and ASEAN levels.

1. Asia-Pacific Regional Forum

Indonesia hosted the Asia-Pacific Regional Forum on Health and Environment (APRFHE), focusing on the intersection of health and environmental issues. The forum emphasized climate change adaptation, pandemic preparedness, and pollution management, advocating for integrated policies to support sustainable development and enhance the resilience of health systems against environmental threats.

2. Collaboration with WHO and ASEAN

Indonesia continued its collaboration with the World Health Organization (WHO) through agreements addressing health transformation across six pillars, including promoting healthy lifestyles, expanding immunization coverage, and conducting implementation research. Additionally, through ASEAN, Indonesia engaged in cross-country policy discussions to improve access to healthcare services and mitigate pandemic risks.

3. Strengthening Regional Health Capacity

With support from WHO and the European Union, Indonesia enhanced laboratory capacities for PCR and genomic testing and developed cross-stakeholder mechanisms for pandemic preparedness and response. These initiatives included training healthcare workers, advancing telemedicine services, and improving environmental health surveillance to address potential health crises.

Indonesia's involvement reflects its commitment to strengthening the national health system while contributing to regional and global health stability. These efforts align with the Sustainable Development Goals (SDGs) at the regional level.

2.2.2.1. Engagement in ASEAN

Health cooperation within ASEAN is closely linked to two primary pillars of the ASEAN Community:

1. The ASEAN Socio-Cultural Pillar, coordinated by the Ministry of Health.

This pillar guides regional health development through the ASEAN Health Ministers Meeting (AHMM), supported by the Senior Officials Meeting on Health Development (SOMHD) and four ASEAN health clusters:

- **Cluster 1:** Promoting Healthy Lifestyles
- **Cluster 2:** Addressing Emerging Threats and Challenges
- **Cluster 3:** Strengthening Health Systems and Access to Services
- **Cluster 4:** Ensuring Food Safety

2. The ASEAN Economic Pillar, coordinated by the Ministry of Trade as the lead agency.

Under this pillar, health-related trade issues, such as pharmaceutical products, traditional medicines, and cosmetics, are managed by the Food and Drug Supervisory Agency through product standardization. The Ministry of Health also actively participates in the ASEAN Coordinating Committee on Services (CCS), addressing healthcare services, medical devices, and health sector investments.

Through the synergy of these two pillars, ASEAN countries aim to address shared health challenges more effectively.

2.2.2.2. Engagement in APEC

In economic cooperation within the health sector, Indonesia's national interests are formulated and negotiated through the Asia-Pacific Economic Cooperation (APEC) forum. The Ministry of Health supports health transformation in areas such as Universal Health Coverage, mental health and well-being, the impact of climate change on health, and immunization throughout the life course. Notably, the APEC High-Level Meeting on Health and Economy endorsed a joint statement on these priorities.

2.2.2.3. Engagement in ERIA

On February 20, 2024, the Ministry of Health, represented by the Head of the Health Development Policy Agency, signed a Memorandum of Understanding (MoU) with the Economic Research Institute for ASEAN and East Asia (ERIA). This collaboration is valid for five years and encompasses all health transformation pillars. Currently, activities are underway for Pillar 1 (Primary Health Services) and Pillar 3 (Health Resilience).

Key initiatives include:

- Research on Healthy Active Aging and Longevity in Indonesia, a collaboration between ERIA, the Faculty of Medicine at the University of Indonesia, and the Directorate of Productive and Elderly Age. This research has been completed.
- Assistance in drafting the National Essential Diagnostics List (NEDL) across ASEAN member states, including regional meetings on the subject. Discussions are ongoing, but the drafting of documents has not yet commenced.
- Support for ASEAN Diagnostic Security and Self-Reliance (ADxSSR), led by Indonesia.

2.2.3 INDONESIA AND MULTILATERAL FRAMEWORK

By 2024, the Ministry of Health (MoH) has established partnerships with more than 40 international organizations as part of the realization of Indonesia's free and active foreign policy strategy. Multilateral cooperation has contributed significantly to health development programs and aligns with the pillars of Health Transformation, including:

1. Knowledge and experience exchange in global health.
2. Access to funding, grants, investment, and business opportunities.
3. Strengthening Indonesia's position and reputation in the international community to bolster global health resilience.

World Health Assembly (WHA) 77

The WHA is the primary decision-making body of the World Health Organization (WHO), a United Nations agency responsible for international health issues. WHA serves as a critical forum for global health diplomacy, allowing WHO member states to interact and collaborate to improve public health worldwide.

The WHA convenes annually in May for approximately one week at the WHO headquarters in Geneva, Switzerland. The 77th WHA was held on June 1, 2024, resulting in a decision for WHO member states to continue discussions on the Pandemic Treaty. The target is to reach an agreement by the 78th WHA in 2025 or earlier during a special session.

Indonesia's involvement in WHA 77 included:

- **Resolution Document WHA 77 (2024) – Indonesia as Co-Sponsor: AMR**

Indonesia co-sponsored a resolution on Antimicrobial Resistance (AMR). The MoH actively participated in the UN High-Level Meeting on AMR during the 79th UN General Assembly on September 26, 2024, in New York. Additionally, the MoH has developed the 2025-2029 National Strategy for AMR Control in the health sector, following WHO guidelines using a People-Centered Approach.

- **Resolution Document WHA 77 (2024) – Indonesia as Co-Sponsor: Palestine**

In May 2024, Palestine was officially recognized as an observer at UN meetings, enjoying rights equivalent to member states except for voting rights. The WHO Director-General implemented recommendations outlined in the resolution.

2.2.3.1 World Health Organization (WHO)

Indonesia formally became a WHO member on May 23, 1950. The WHO's financial support to Indonesia under the Grant Agreement with the MoH includes:

- USD 10,287,574 (2020–2021)
- USD 14,023,978 (2022–2023)
- USD 14,003,191 (2023–2024)

Indonesia represented the Southeast Asia Region (SEAR) on the WHO Executive Board (2018–2021), advocating for regional aspirations and contributing to key global health initiatives such as resolutions on eye health, TB, non-communicable diseases (NCDs), human resources for health, and COVID-19 response.

By 2021, the MoH participated in over 148 WHO-led meetings, training sessions, and workshops at global and regional levels. As of 2022, 18 Indonesians worked for WHO globally, while 91 were employed at the WHO Country Office in Indonesia.

Future priorities for Indonesia's WHO membership include:

- Implementation of the 2020–2024 Strategic Health Plan.
- Advancement of Health Transformation.
- Elevating national health agendas to global forums to accelerate commitments like SDGs, UHC, TB elimination, and polio eradication.

2.2.3.2 United Nations Children's Fund (UNICEF)

UNICEF's partnership with MoH is governed by a Program Document (January 2021–December 2025), with a grant amounting to USD 31.618 million. Currently, 15 work units have signed Annual Work Plans across four outcomes:

- Nutrition: USD 3,010,000
- Water, Sanitation, and Hygiene (WASH): USD 3,541,152
- Health (newborn, child, adolescent health, immunization, emergency health, and health system strengthening): USD 22,302,497
- Program Effectiveness: USD 7,878,269

2.2.3.3. Global Health Security Agenda (GHSA)

The GHSA Steering Group includes 23 countries and organizations (e.g., WHO, FAO, WOAH). Indonesia actively participates in five of nine Action Packages: zoonotic diseases, AMR, national laboratory systems, biosafety and biosecurity, and workforce development. By 2024, GHSA aims to:

1. Strengthen member engagement to support global health resilience.
2. Promote cross-sector collaboration to enhance GHSA capacity.
3. Increase information exchange among member states.
4. Improve accountability for member commitments.

Indonesia contributed significantly as GHSA Permanent Secretariat (2019–2023), supported by USAID and WHO.

2.2.3.4 Global Fund

Since 2002, Indonesia has received USD 1.45 billion in grants from the Global Fund for AIDS, TB, and malaria programs. At the Global Fund's Seventh Replenishment Conference in September 2022, Indonesia pledged USD 15.5 million (2023–2025), marking its first contribution as a donor.

The Deputy Minister of Health serves as an Alternate Board Member (2022–2024) and will assume the Board Member position (2024–2026), advocating for Southeast Asia's health priorities.

2.2.3.5. Coalition for Epidemic Preparedness Innovations (CEPI)

CEPI collaborated with Gavi and WHO to initiate the COVAX Facility during the COVID-19 pandemic. Indonesia's partnership with CEPI began in 2020, with a USD 1 million contribution enabling PT Biofarma to participate in global vaccine development.

At the 2022 Global Pandemic Preparedness Summit, Indonesia pledged USD 5 million for vaccine development and research, with opportunities for Indonesian researchers to access CEPI funding.

2.2.4 GRANTS AND LOANS

The grant commitment from various global partners in Indonesia's health sector for 2021-2025 is reaching Rp 11.4 billion (around US\$735.65 million).

Standardize hospital hubs under the Biomedical Genomic Science Initiative (BGSI), with a focus on enhancing biobanking, sequencing, and bioinformatics capabilities, from 2024 to 2027. Organize a Biotech Summit focused on precision medicine and precision public health, aimed at fostering innovation and collaboration in these fields, from 2024 to 2027. Expand hospital hubs for genomic services and integrate public-private partnerships to enhance resources, expertise, and implementation capacity, from 2024 to 2027. <p>Grants & Loans</p> <ul style="list-style-type: none"> Collaborate with UNDP for the procurement of BGSI equipment (Whole Genome Sequencing - ONT, Illumina, MGI, reagents, and information systems including hardware and software) and ILI SARI at designated laboratories selected by the Ministry of Health, from 2020 to 2025.

3.3.2 Optimizing the Monitoring and Evaluation Process to Track the Impact of Partnerships Related to the Indonesia National Health Master Plan (RIBK)

The MoH will assess the project's performance using evidence collated from partner reporting, joint monitoring visits, and post-engagement with health development partners regularly, quarterly, or every six months. A Monitoring and Evaluation framework draft outlines the key performance questions against the Theory of Change and relevant data collection sources. A report will be prepared by the program or project six months before its completion.

Two key performance questions will guide MoH's evaluation of the performance of the implementation:

01. How effective is the project in supporting the MoH in reaching the expected outcome from the international partnerships, in particular efforts to close the gap between the baseline and target in the working area to build health transformation?
02. Is the project area improving with increased budget and resourcing and the MoH's increased capacity to design and implement current and future reforms?

Below is the suggested Monitoring and Evaluation Framework.

(Annex 1. Table Money, based on Theory of Change)

BAB 4

Recomendation

- RIBK, or National Health Master Plan, is the reference point for developing international partnerships in the health sector in Indonesia
- Nurture relationships, foster dialogue, and build trust with donor counterparts.
- Develop multisectoral, institutional, and ministerial coordination by mapping out the stakeholders, developing clear communication channels, regularly convening joint meetings, developing shared goals and performance indicators, and building capacity through training.
- Developing an international office that acts as a one-stop information and coordination center for international partnerships in the Indonesian health sector
- MoH must take a leadership role when a donor submits a proposal to undertake a program/project and refer to the RIBK current activities to avoid duplication.
- MoH must build capacity in HR in terms of diplomatic and communication skills to be actively involved in international settings and negotiations.
- Determine success indicators that refer to the target and objectives, conduct monitoring and evaluation regularly, and review them after each cycle of a program or project.
- When starting a new program or project, plan with SMART approach (Specific, Measurable, Achievable, Realistic, and Time-bound) and always consider the Sustainability of the outcome after the program or project is finished.
